

Modular & Containerized Custom Systems

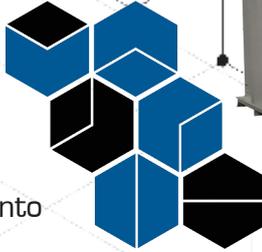

BURT | **PROCESS
EQUIPMENT**

Partners In Global Water Quality

Containerized Modular Systems are self-contained units beyond just a skid, which are integrated into a container or other light building structure and include:

- Utilities
- environmental protection
- Convenience lighting

Containerized systems serve as completely stand-alone processes that can be integrated into the building without direct impact.

Advantages of containerized modular systems include:

- Minimum to no down-time of existing process
- No impact on existing building structure
- Saves interior space
- Allows for segregated hazardous storage
- Can be implemented quickly without major construction

All systems can be built into a containerized system.

- pH Neutralization Systems
- Wastewater Treatment
- Filtration Equipment
- High Purity Water Generation Equipment
- Rainwater Reclamation Systems
- Custom Plastic and Stainless-Steel Fabrications
- UL Listed Custom Control Panels
- Chemical Feed Systems
- Wet Process Benches
- Pump Lift Stations
- Tanks and Mixers
- Process Instrumentation and Controls
